

Hearing Matters

Middle TN Ear, Nose & Throat

Fall 2010

Wireless Communication

Technology has evolved so much that everything is wireless these days. Many hearing aids are capable of “talking” to these wireless devices. Typically, the hearing aids have a small device that links to Bluetooth mobile phones, landline phones with a Bluetooth adaptor, Mp3 players including iPod, computers, TV, and video game stations. Now you can hear these things through your hearing aids! Let us know if you would like to see if your hearing aids are capable of this option.

What's New with Hearing Aids?

Are your hearing aids doing enough for you? If not, you may need new hearing aids. Hearing aid technology is growing at tremendous speeds. Also, hearing aids are smaller than ever! Hearing aids are now able to communicate with one another to behave more like our brains do when we process the sounds that we hear. Devices are better able to amplify higher pitch sounds where most people have hearing loss and decrease unwanted sounds such as background noise. These newer hearing aids have little or no feedback, so no annoying whistle! Amplification devices continue to improve every day. Call or email us to find out more about the newer technology that today's hearing aids offer.

GREAT DEAL!!!

Are you looking for new hearing aids or know someone who is? We have several demo sets of premium aids that are being sold at less than half the original cost. The aids will be recased in the color of your choice and will come with a one year warranty. If you are interested please contact us as soon as possible.

Hurry - these will not last long!!!

ATTENTION

Oticon Delta

owners!!!

We have a limited supply of Oticon Delta cases! If you are interested in changing your Delta case to another color or just getting new ones, please contact us. They are half priced at \$15 a pair.

Helping you hear better because your hearing matters.

Congratulations to Dr. Sue Vavrock
and her family who welcomed
a baby boy on October 2.

Protect your ears!

You can now order Kidzsafe Earbuds, special earbuds compatible with any audio device. No matter how high the volume is turned up on the device, the volume level will always remain below 85 decibels. Experts agree that listening above this 85 dB threshold is when hearing damage can begin. The cost is \$19.95 a pair.
