

Like many others, I came to Dr. Richman's office very skeptically. Just because I flunked the hearing test was no reason to get carried away.

I am so glad I chose to go ahead. I have had "my ears" for almost two months, and they have significantly changed my life.

Each day has been an adventure, I have learned...

there are a lot more birds near the house, especially early in the morning

a room at church did not suffer from poor acoustics; my ears did.

my grandchildren speak much more clearly on face time than before; so do my son and daughter-in-law.

the television and radio were loud, and had to be turned down.

this has been so much fun, I'm just sorry I didn't do it sooner!
