

MAY **is Better Hearing Month**

As we celebrate the gift of hearing, this is the perfect time to be sure your hearing is the best it can be. You should have a baseline hearing test by age 50, or sooner if there is a family history of hearing loss or if you have a history of noise exposure. Studies show that hearing loss can affect your memory as well as your quality of life, so don't ignore any changes in your hearing.

Smarter Hearing Aids **The Age of New Technology**

Most of today's hearing aids communicate wirelessly with your TV, cell phone, and iPod; but many of them also talk to each other to ensure you are enjoying the best possible hearing in quiet and in noise. Recent advancements include Speech in Wind programs, and DuoPhone that allows you to hold the phone to one ear and hear in both ears. Some offer a small remote microphone that your partner can wear in the most challenging situations such as loud restaurants. Many of them are moisture resistant so you don't have to be as concerned about perspiration or getting caught in the rain. Styles are smaller and more comfortable than ever before, and with four levels of technology we have a solution for every budget.

Hearing Loss and Your Health **Heart Disease and Diabetes**

Hearing loss is more common in patients with heart disease and diabetes. Untreated hearing loss can lead to anxiety, which can affect your blood pressure. Feelings of isolation from not being able to participate in conversations can lead to depression and social withdrawal. You owe it to yourself and your family to get help when you need it.

Hear From our Patients

"I found the services to be very helpful. The staff is gracious and welcoming. Dr. Marquis goes to great length to explore every option for the patient to ensure the best device for their particular situation." MEL

WE APPRECIATE YOUR REFERRALS

Referring your friends and family is the highest compliment you can pay us. As a thank you for referring new hearing aid patients, we will make a contribution to a charity of your choice.

Thank you for choosing Wake Audiology as your hearing care provider.

Sincerely,

*Dr. Catherine Marquis
Carol and Sandy*

Hearing Focus Tip:

Consider low frequency smoke alarms if you have severe hearing loss.
